SUMMARY

DevOps Engineer with 1+ year of hands-on experience supporting production workloads, CI/CD automation, Kubernetes delivery, infrastructure as code, GitOps, observability, SRE practices, and platform engineering workflows. Skilled in AWS, Docker, Kubernetes, Helm, Terraform, Ansible, GitLab CI/CD, GitHub Actions, Jenkins, Argo CD, Prometheus, Grafana, ELK, Python, Bash, and secure Linux operations. Known for clear communication, ownership, teamwork, adaptability, structured problem solving, documentation discipline, and attention to detail.

WORK EXPERIENCE

Firmus Financial | DevOps Engineer | May 2025 – July 2026

- Started as a Data Analyst, then transitioned to DevOps Engineer as the team scaled its infrastructure needs.
- Managed AWS infrastructure across 6 core services including EC2, VPC, S3, RDS, CloudWatch, and Route 53 for fintech workloads.
- Containerized 9 backend services across 3 stages using Docker, Kubernetes, Helm, and Nginx, reducing release inconsistency by 30%.
- Optimized GitLab CI/CD pipelines for testing and Kubernetes deployments, cutting manual delivery effort by 50%.

Upwork | Freelance DevOps Engineer | Self-employed | Project-based / On-demand | April 2025 – Present

- Delivered Docker-based hosting for PHP/Laravel and Python web applications for 4 freelance clients across 2 release stages.
- Set up CI/CD workflows for 2 deployment targets, bringing recurring release preparation time down from hours to under 30 minutes.
- Resolved Docker networking, DNS, reverse proxy, permissions, logs, and runtime issues across 4 client environments, reducing repeat incidents by 20%.

EDUCATION

B.Sc. in Artificial Intelligence - Kafr El Sheikh University | October 2020 – August 2024 | Kafr El Sheikh, Egypt (GPA: 3.7/4.0)

CERTIFICATIONS

- AWS Certified Cloud Practitioner - Amazon Web Services Training and Certification
- DevOps Engineering Professional Certificate - Route Academy

SKILLS

Cloud & IaC: AWS (EC2, EKS, S3, RDS, VPC, Route 53, CloudWatch), Azure, Terraform, Ansible, LocalStack

Containers & Platform: Docker, Kubernetes, Helm, Kustomize, Docker Compose, K3s, Kind, Traefik, Nginx, Ingress

CI/CD & GitOps: Git, GitLab CI/CD, GitHub Actions, Jenkins, Argo CD, Maven, JUnit, JaCoCo, rollout and rollback workflows

SRE, Monitoring & Security: Prometheus, Grafana, Alertmanager, SLOs, k6, ELK Stack, Filebeat, Logstash, Loki, Trivy, SBOM, NetworkPolicies, RBAC, SSL/TLS, Linux, Bash, Python, Java 17, Spring Boot, MySQL, PostgreSQL, Redis, RabbitMQ

PROJECTS

OpsVision

- Built a local SRE and observability lab for a checkout workflow using FastAPI microservices, Kubernetes, PostgreSQL, Redis, RabbitMQ, Prometheus, Grafana, Alertmanager, Elasticsearch, Kibana, Filebeat, Logstash, and Argo CD.
- Implemented dashboards, alerts, SLO burn-rate rules, structured JSON logs, request correlation, runbooks, k6 tests, chaos drills, and PostgreSQL backup/restore checks.
- Validated 91 tests, 85.19% coverage, 25 alert rules, 33 SLO rules, 111 Kubernetes resources, 0 invalid manifests, 0 secret findings, and 0 High/Critical Trivy findings.

InfraPilot

- Designed an internal developer platform-style DevOps control plane that standardizes service onboarding from YAML definitions to Kubernetes, GitOps, CI/CD, observability, and security assets.
- Automated GitLab CI/CD and GitOps workflows with manifest generation, Kustomize overlays, Argo CD applications, Terraform/Ansible validation, Docker builds, image promotion, smoke tests, and rollback scripts.
- Implemented supply-chain controls with non-root Dockerfiles, immutable image tags, Trivy scans, CycloneDX SBOMs, secret scanning, and protected registry publishing.

Volt Store

- Provisioned a K3s Kubernetes cluster on a Contabo VPS using Ansible with Traefik ingress, cert-manager SSL, Argo CD GitOps, Kubernetes Secrets, and prune-protection controls.
- Built a 4-stage GitLab CI/CD workflow for zero-downtime rolling deployments under 4 minutes, triggered on every Git push.
- Deployed Prometheus, Grafana, Alertmanager, and Telegram alerting for pod health, storage usage, database status, and daily cluster reports.

LaravelOps Deployment Platform

- Built a Laravel DevOps platform using Docker Compose, PHP-FPM, Nginx, MySQL, Redis, GitLab CI/CD, Helm/Kustomize, Argo CD, NetworkPolicies, RBAC, and Terraform AWS blueprints.
- Packaged application delivery with environment overlays, security checks, monitoring hooks, release notifications, rollback notes, and reusable infrastructure documentation.

Cloud-Native Microservices Platform

- Built a React, Flask, and PostgreSQL microservices platform with Docker, Kubernetes, GitLab CI/CD, HPA, NetworkPolicies, Prometheus, Grafana, ELK/Filebeat, LocalStack, and rollback notes.
- Implemented Kubernetes workload patterns including Ingress, ConfigMaps, Secrets, ServiceMonitor, StatefulSet, persistent volumes, CI validation, and cost-aware infrastructure testing.
